Q: "WHAT IS HARD WATER?"

A: If you live where the water is "hard," then you already know that it is difficult to use with ordinary soap for washing because it doesn't readily form soap suds. Hard water is water which contains large amounts of certain dissolved minerals. Hard water does not dissolve soap readily. Instead of good suds, small gummy particles are formed. Hard water can be softened by filtering it through water softening machines which treat it with chemicals to remove the hardening minerals. Water containing fewer minerals, in which soap will make good suds, is "soft" water.

You can win a World Almanac if your question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1258, Santa Cruz, CA 95061.
